**Contact for more details:**  
82 7373 3030/82 7373 3535

**Plant Name:** Jamun

**Botanical / Scientific Name:** Syzygium Cumini

**Family:** Myrtaceae

**Spacing:** 15x15, 18x18, 20x20, 25x25 feet (plant to plant row to row distance)

**Variety:** Kokan Bahadoli, White Jamun, Seedless Jamun

**Soil:** It can be grown on a wide range of soil, like medium salt tolerant, saline, and calcareous soil but deep loam well drained suitable for cultivation. Such soils also retain sufficient soil moisture which is beneficial for optimum growth and good fruiting. Avoid heavy and light sandy soil. It can survive up to 10.5 pH alkali soil.

**Climate:** It is a sub-tropical fruit required hot and dry climate. It can grow in adverse climatic conditions, required dry weather at the time of flowering and fruit setting. Young plants are susceptible to frost conditions. Annual rainfall ranging from 350-500 mm. In sub-tropical regions early rain is beneficial for fruit development, ripening, color and test.

**Production:** Production starts after 3 years of plantation, 125-150 kg/tree after 15 years

**Pest:** Leaf eating caterpillar, white fly, bark eating caterpillar, Jamun leaf minor

**Disease:** Anthracnose

# Jamun

## *Kokan Bahadoli*

**Contact for more details:**  
82 7373 3030/82 7373 3535

**Variety:** Kokan Bahadoli,  
**Plantation date:** 25/07/2023  
**Spacing:** 10X15 Feet  
**Plantation Area:** 20 R  
**No. of plants:** 150

**Character of Kokan Bahadoli:** Regular bearer variety, having big size of fruit (20-25 gm) with long keeping quality, semi spreading, dome shape and dark green foliage.

**Production:** Production starts after 3 years of plantation, average 125-150 kg/tree after 15 years

# Jamun

## *White Jamun*

**Contact for more details:**  
82 7373 3030/82 7373 3535

**Variety:** White Jamun

**Plantation date:** 22/11/2023

**Spacing:** 12x10 feet

**Plantation Area:** 0.5 R

**No. of plants:** 5

**Character of White Jamun:** Early variety, production started after 3 years, good texture and structure of fruits, shiny white color of fruits, size of seed smaller than pulp.

**Production:** Fully grown mature plant gives 60 to 70 kg fruits per plant per year

# Jamun

## *Seedless Jamun*

**Contact for more details:**  
82 7373 3030/82 7373 3535

**Variety:** Seedless Jamun  
**Plantation date:** 22/11/2023  
**Spacing:** 12x10 feet  
**Plantation Area:** 0.5 R  
**No. of plants:** 5

**Character of Seedless Jamun:** Seedless fruit, early variety, fruit ripens second week of June. Fruits are round in shape, average size 6.87 gram with 2.57cm in length, 98% pulp and 14.7° brix TSS.  
**Production:** Production starts after 3 years of plantation, average 10-year-old plant gives 60–90 kg of fruits per plant.
